Where Health and Beauty Become One

Medical Weight Loss
Weight loss can now be achieved with the aid of several safe and effective prescription medications. We have been successfully practicing medical weight loss for 15 years, with excellent results, often eliminating the need for surgical interventions.

Laser Hair Removal
Reduce unwanted hair from legs, underarms, bikini line, backs and faces safely and effectively. No need to wax or shave anymore! This procedure is quick and easy. It may require several visits to accomplish a satisfactory long lasting result.

Laser Vein Therapy
Using the latest in laser technology, veins in the face and legs can be eliminated or dramatically reduced with little discomfort and without injections.

Skin tightening
Using the Titan XL laser technology with deep dermal heating, collagen is stimulated to grow beneath the skin surface improving the appearance of sagging skin on the face, neck and abdomen. This is an excellent non-surgical option that can result in a more youthful appearance.

Sun spot and cherry spot removal
Sun or age spots can now be easily removed with pulsed light, flaking off in just a few days. Cherry red spots can also be destroyed with the yag laser.

Photofacial
The IPL photofacial is a laser rejuvenation treatment using pulsed light to quickly, safely and comfortably remove sun and age spots from the face, chest, arms and hands. There is no anesthesia or down time for this procedure, often called the “lunch time” facial. Signs of sun damage will flake off after one or two treatments.

Laser Genesis
Laser rejuvenation safely treats facial redness, rosacea, large pores, uneven skin texture, fine lines and wrinkles, promoting more healthy, vibrant looking skin in men and women. No down time or anesthesia is necessary.

Botox injections
Botox injections, the most commonly performed cosmetic procedure in the US, is a safe and effective therapy to remove facial wrinkles and frown lines. It is most commonly used in the upper face to relax “angry” lines between the eyes, as well as the forehead and “crows feet”.

Juvederm
Juvederm is a smooth gel filler used to smooth and fill deeper creases around the mouth and nose. The results are instantaneous and can last up to one year.
Family Practice Associates of Voorhees has been successfully treating patients in the South Jersey area for over twenty years. Our commitment to healthcare and the ability to meet the needs of our patients continues to grow. In addition to Primary Care Services, we now offer a wide variety of healthcare solutions including cosmetic enhancements and medical assisted weight loss. Our services include:
